

Setting up Twilio to configure WhatsApp notification :

1. Sign up to Twilio on <https://www.twilio.com/try-twilio>. This is a simple sign up with few details like Name, email etc.
2. Verify the account by going to email and clicking on verification email
3. In console, click on 'Get a Trial Number' as seen in dashboard. Chose the default number that the screen displays. Screenshot attached.

4. Copy 'Account SID' and "Auth Token" from the same dashboard. Please don't share it with anyone. Copy both of them to code at line 110 and 111.

5. Visit <https://www.twilio.com/console/sms/whatsapp/sandbox>. Agree to terms and send the whatsapp message to number that displays on the screen. The message and whatsapp number will be unique and both of them can be found on same screen.

## Learn: Twilio Sandbox for WhatsApp

### 1. Set Up Your Testing Sandbox

To send messages with WhatsApp in production, WhatsApp has to formally approve your account. But, that doesn't mean you have to wait to start building. Twilio Sandbox for WhatsApp lets you test your app in a developer environment.

To begin testing, connect to your sandbox by sending a WhatsApp message from your device to +1 415 839 5662 with code **join**. If WhatsApp is installed on this device, you can [click here](#).

**Note:** Sandbox is not intended for production usage. Sandbox sessions expire after 3 days.

Waiting for your message

[I've received the confirmation](#)

Have your messages ever been blocked by a US carrier? There's a new process called A2P registration that should alleviate this. Help us shape your experience in a usability test with our team so we can make the A2P registration process simpler. Are you interested? (\$75 paid research opportunity for those who qualify)

☐ Yes, I'd like participate

☐ No thanks

6. Copy the same WhatsApp number to code at line 112.
